Plan Review Checklist

Evaluate Claude's plan before building

Clarity Check:

■ I understand what we're building

■ The steps are clear and logical

■ No confusing jargon or unexplained concepts

■ I can visualize the end result

Completeness Check:

■ All required features are addressed

■ File structure is defined

■ Dependencies are identified

■ Timeline or order of operations is clear

Feasibility Check:

■ Approach seems realistic for our skill level

■ No overly complex solutions for simple problems

■ Trade-offs are acceptable

■ Can be built incrementally (not all-or-nothing)

Questions to Ask:

- "What could go wrong with this approach?"
- "Are there simpler alternatives we haven't considered?"
- "How will we test that this works?"
- "What happens if [edge case]?"
- "Can we build a minimal version first?"

If you're uncertain, ask Claude to clarify or revise the plan.
